

# Case Study

*Aligning client delivery and reporting requirements with internal corporate requirements*

## Summary

Martinus required a specialist to take over a number of contracts to set up the sustainability framework to client requirements which included strategies, monitoring, reporting and auditing procedures.

## RESULTS

By combining skills in sustainability management, procurement and corporate reporting, iCCOUNT delivered site reporting data on a very limited time frame. The sustainable procurement deliverables and templates for reporting were set up and aligned to internal reporting systems.

**100%**  
Reporting data collected

## OBJECTIVES

The project was already underway and needed all sustainability systems in place in a very short time. Procedures were put into place while procurement and multiple site reporting systems were developed and implemented through training and education.

## SOLUTIONS

Streamlining procurement and reporting within sustainable procurement practices and the tracking of material use assisted in meeting all project deadlines for their reporting requirements, while meeting internal corporate reporting requirements.

**Contract assessment**

**Project reporting**

**Corporate reporting**

## BENEFITS

1

### Outcome

New systems were developed in a short time frame and then the new procedures education and training, were communicated to site and corporate teams.

2

### Streamlined reporting systems

Alignment in reporting to client and corporate systems.

3

### Continued success

Site procedures and reporting systems were rolled out across other sites that were yet to open.
